

2) Sanitary Ice Chamber: For sanitary operation and ease of cleaning, all inside corners have large radius, and ice slides are form-pressed into bottom of ice chamber.

Entire cabinet constructed of heavy-gauge, polished, sanitary stainless steel; precision welded to withstand years of use and abuse.

9) ETL Listed for NSF sanitation and UL safety standards. Recognized nationally by state and local health departments

8) Snow Control: Ergonomically designed hand lever advances the ice into the cutter head, giving the operator total control of snow delivery into the cup.

7) Magnetic Door: Magnetically latching closure securely holds door in place without any latches to loosen and wear out.

6) Stainless Steel Blades: Proper composition of stainless steel and carbon steels hardened to 53 on the Rockwell scale. Sanitary, resists corrosion and holds an edge longer than regular blades.

3) Tri-cutter Head: Machined aluminum cutter head designed to hold the three stainless blades on the same cutting plan to quickly shave ice into fluffy snow.

4) Belt Guard: Stainless steel belt guard designed to aesthetically enhance the appearance of the machine while functionally protecting the operator from the moving belt and pulleys.

5) Stainless Steel Bearings & Engineered Pulley: Rust-proof zinc pulley and stainless steel sealed roller bearings engineered to mate and provide smooth, maintenance free operation. This combination, unique to the SnowWizard alone, allows for true spinning of the cutter mechanism thus achieving the finest snow possible.
